**Rosen Sunvisor Systems Showcases  
Next Generation 5-Axis ARC® Sunvisor System at NBAA 2014.**

Stylish, innovative and customizable 5-Axis ARC sunvisor system design provides stable, multi-directional deployment glare reduction for fixed wing and rotor aircraft.

**Eugene, OR. September 2014.** Rosen Sunvisor Systems (RSS) has developed the ARC® Sunvisor Assembly, a 5-Axis sunvisor system with flexible mounting configurations for implementation on fixed wing and rotor aircraft.

Based on a new generation of Rosen sunvisor designs, the ARC Sunvisor System offers pilots flexible sunvisor deployment, multi-axis sun attenuation, secure stowage, superior glare reduction and comfort during standard cockpit flight operations.

The Rosen ARC provides a wide range of sun attenuation options within the cockpit, including side, front, overhead and windshield positioning.

The ARC system is designed with an elegant approach to sunvisor geometry, providing symmetrical flight deck sun attenuation.

The ARC sunvisor system provides various monorail and static mounting system equipped flight decks. Rosen Sunvisor Systems provides a fully customizable and collaborative approach for each aircraft OEM mounting, lens geometry, flight deck configuration, mounting and application.

A product demonstration is available at Rosen Sunvisor Systems NBAA Booth #3060.

For more information contact Rosen Sunvisor at 800.284.7677 or visit [www.RosenVisor.com](http://www.RosenVisor.com).

*Rosen Sunvisor Systems specializes in sun attenuation (sunvisor) products, applications and accessories for OEM, Business and General Aviation and Rotor aircraft.*
