Rosen Sunvisor Systems Debuts Innovative Adjustable Aviation iPad Mount for Rosen Monorail Sunvisor Systems.

Complete iPad mounting system offers pilots fully adjustable heads up viewing, positioning and deployment of iPad I-II-III and iPad Mini tablets for use in monorail equipped cockpits.

Eugene, OR. (November 2013). Rosen Sunvisor Systems formally announces an innovative and fully adjustable iPad mounting system for monorail equipped cockpits.

The iPad mounting system features multi-directional adjustability, convenient and fully adjustable deployment presentation and one-hand tension control and locking on monorail equipped cockpits. The engineering behind the mount allows the iPad to be easily stowed up and out of the way while remaining clamped to the rail, or quickly removed for use while on the ground.

The iPad Mount for Rosen Monorail Sunvisor system clamps on any Rosen monorail system or monorails with a diameter of 5/16", and allows pilots to position the iPad for easy viewing of navigation apps above the glare shield. The multi axis mount allows the pilot to place the iPad in virtually any position or placement desired.

"We have received exceptional feedback regarding this approach to iPad mounting in the cockpit," said Gary Hanson, Engineering Manager, Rosen Sunvisor Systems. "This mounting system has a wide variety of positioning options anywhere on the monorail. The iPad Mount can be rotated for landscape and portrait operation and can be tilted to avoid glare."

The system accommodates iPads I, II, III and iPad mini tablet sizes. Each system is delivered with an iPad mounting sleeve and removable-type clamping assembly. The mounting system is available with both short and long hooks to allow installation in a wide variety of airframes.

The iPad mounting system retails for \$185.95 and is available direct and through Rosen's Dealer Network (Aero, Aircraft Spruce, Aeromil, Cee Bailey's, Chief Aircraft, Performance Aero, Glendale International, Plane Plastics, Satair, Texas Aeroplastics, Sky Geek, and Sporty's Pilot Shop).
